Abstract. This research aims to provide insight into the importance of investing and to find out how conscious millennial generation wants to invest their money in the future. This research uses a qualitative approach with the basic theory method (Grounded Theory). Meta Trader 4 provides many benefits for instruments to invest their money. This application can see how much we lose and how much profit we get, many indicators that we can use, then we can monitor the movement of couples in multi-windows, and this investment application also does not require large capital with a minimum capital of 100 k we have can invest. The results of this study are expected for millennial young people to be able to start managing and investing their finances for things that provide financial benefits that can be directly seen, and can be directly controlled from a smartphone.
The global Foreign Exchange Markets, also known as Forex or FX, represents the platform by which currency from one country can be exchanged into the currency from another. The value of currencies around the globe constantly fluctuates depending upon a whole variety of factors and will range upwards or downwards depending upon the economic stability or instability of the countries which issue them. It is these fluctuations in value that present the opportunities to make money [6].

Forex business is a digital business by making purchases or sales to make a profit using MetaTrader 4. In the forex market, most people started by looking only at price charts. This is called technical analysis. Those who focus on technical analysis are often called chartists. However, the study and analysis of what moves those charts are called fundamental analysis. The goal is to identify the components of fundamental analysis regarding the forex, then provide a recipe for developing your fundamental analysis of a currency pair [7]. Therefore, this study aims to find out the importance of investing in future living needs, using Grounded Theory. And this research uses a qualitative approach with the basic theory method.

2. Method
This study used a qualitative method using the basic theory method (Grounded Theory). This research was conducted by a literature study, namely studying books, journals, and articles or other scientific sources to strengthen the theory, as well as doing a direct observation.

3. Results and Discussion
MetaTrader 4 (MT 4) is an electronic trading platform used by traders in online retail foreign exchange. This MetaTrader was created by MetaQuotes Software and released in 2005. This software is licensed as a foreign exchange broker that provides software for clients. This software consists of two components, namely the client and server component. The server component runs its broker and the client component is for the client to see the prices, graphs, place orders, and manage their account [8]. Technical traders who only place their prices are incapable of doing the decision-making process. The great technical traders are always aware of the news and they know how to utilize it with technical tools [9].

- **Main Menu and Login Form**

  First, we should log in on our Meta Trader 4 by filling in the username and password, as well as which broker server we chose before we registered the Meta Trader 4 account.

  After the account is successfully logged in, at the bottom of the page we can see the amount of our deposit when we put our money to be traded with the broker. We can also see the profit amount, our transaction history such as what pair we entered, in what price, what size, as well as the stop-loss and our profit target. After that, in the profile table at the bottom right we can see the amount of profit or loss we received. Figure 1 below shows the Main Menu and Login form display.
• **Add pairs**

In the add pairs menu we can add any pairs that we want to analyse. Figure 2 below shows the add pairs menu.

![Figure 1. Main Menu and Login Form](image1.png)

**Figure 1. Main Menu and Login Form**

![Figure 2. Add Pair](image2.png)

**Figure 2. Add Pair**

• **Add Indicators**
On the Add Indicators menu, we can choose one or many indicators that we want to use to support the results of our analysis. Figure 3 below shows the Add Indicator menu.

- **Orders**
  
  In this order menu, there is a symbol for pairs that we will choose, volume or size, stop loss to minimize losses, and take profit to see how much profit we will get from buying or selling transactions in the currency we choose. Figure 4 below shows the Order menu.

- **Time Frame**
  
  In the time frame menu, we can choose what time frame we want to see. There are monthly, weekly, daily, hours, and minutes. The longer time frame we used, the more profit we can get. The shorter time frame we used, the less profit we get. Figure 5 below shows Time Frame menu.
• Market Watch

In the left side, there is a market watch, which includes almost all currency in forex market. It also displays the bid. Each currency represented by a three-letter currency code according to the Internal [10]. Figure 6 below shows Market Watch menu.

4. Conclusion

This Meta Trader 4 (MT 4) application is important and useful for traders especially for the millennial generation to invest because this application is easy to learn and download. This application can see how much we lose and get the profit, how many indicators that we can use, monitor the movement of pairs in multi-windows, and does not require large capital, with only 100 k, we can already invest using this application.
